

$$1) 32 \times 20 = 640$$

$$9) \frac{1}{3} \text{ of } 15 = 5$$

$$2) 10\% \text{ of } 42 = 4.2$$

$$10) 55 + 125 = 180$$

$$3) \frac{1}{5} \text{ of } 25 = 5$$

$$4) \text{Circumference is } r = 4 \text{ cm}$$

$$5) 8006 \div 2 = 4003$$

$$6) 50\% \text{ of } 120 = 60$$

$$*7) A \text{ of parallelogram if } h = 7 \text{ cm, } b = 4 \text{ cm}$$

$$8) 84 \div 2 = 42$$

$$A = bh$$

$$7 \times 4 = 28 \text{ cm}^2$$

2. Find the area of each parallelogram.

$$A = bh$$

$$= 13(24)$$

$$= 312 \text{ cm}^2$$

>

$$A = bh$$

$$= 15(13)$$

$$= 195 \text{ mm}^2$$

$$A = bh$$

$$= 24(16)$$

$$= 384 \text{ km}^2$$

6. Use the given area to find the base or the height of each parallelogram.

a) Area = 60 m²

$$A = bh$$

$$60 = 12(h)$$

$$h = \frac{60}{12}$$

$$h = 5m$$

b) Area = 6 mm²

$$A = bh$$

$$6 = b(2)$$

$$b = \frac{6}{2}$$

$$b = 3mm$$

$$A = bh$$

$$h = \frac{A}{b}$$

c) Area = 30 cm²

$$A = bh$$

$$30 = b(5)$$

$$b = \frac{30}{5}$$

$$b = 6cm$$

$$h = \frac{A}{b}$$

$$h = \frac{100}{25}$$

$$h = 4m$$

10. Take It Further A restaurant owner built a patio in front of his store to attract more customers.

- a) What is the area of the patio?
 - b) What is the total area of the patio and gardens?
 - c) How can you find the area of the gardens?
- Show your work.

cong!

$$\begin{aligned}
 a) \quad A &= bh \\
 &= 14.4(6.6) \\
 &= \boxed{95.04 \text{ m}^2}
 \end{aligned}$$

|

$$b) \quad 14.4\text{m} + 5.6\text{m} = 20\text{m}$$

$$\begin{aligned}
 A_{\square} &= bh \\
 &= 20 \times 6.6 \\
 &= \boxed{132\text{m}^2}
 \end{aligned}$$

$$\begin{aligned}
 A_{\triangle} &= bh \\
 &= 5.6(6.6) \\
 &= 36.96\text{m}^2
 \end{aligned}$$

c)

$$\textcircled{2} \quad 132\text{m}^2 - 95.04\text{m}^2 = 36.96$$

When we draw a diagonal in a parallelogram, we make 2 congruent triangles.

Congruent triangles have the same area.

The area of the two congruent triangles is equal to the area of the parallelogram.

So, the area of one triangle is $\frac{1}{2}$ the area of the parallelogram.

$$A = \frac{bh}{2}$$

Example

Find the area of each triangle.

For an obtuse triangle, the height might be drawn outside the triangle.

$$\begin{aligned}
 A &= \frac{bh}{2} \\
 &= \frac{17(9)}{2} \\
 &= \frac{153}{2} \\
 &= 76.5 \text{ cm}^2
 \end{aligned}$$

$$\begin{aligned}
 A &= \frac{bh}{2} \\
 &= \frac{3.1(4.2)}{2} \\
 &= \frac{13.02}{2} \\
 &= 6.51 \text{ m}^2
 \end{aligned}$$

$$A = \frac{bh}{2}$$

$$18 = \frac{(9)h}{2}$$

$$h = \underline{\hspace{2cm}}$$

$$A = b(h) \div 2$$

$$18 = 9(h) \div 2$$

b)
