

Warm-Up

1. Are the triangles similar? How do you know?
2. Solve for x

$$\angle F = \angle C$$

$$\angle D = \angle A$$

$$\angle E = \angle B$$

$$\triangle DEF \sim \triangle CAB$$

$$\frac{AC}{DF} = \frac{AB}{DE}$$

$$\frac{x}{7.5} = \frac{12}{6}$$

$$x = 15$$

4. Which triangles in each pair are similar?

How do you know?

a)

$$\angle R = \angle H$$

$$\angle P = \angle N$$

$$\angle Q = \angle M \quad \Delta RQP \sim \Delta HNM$$

b)

shortest

$$\frac{ST}{JH} = \frac{SU}{JG} = \frac{TU}{HG}$$

$$\frac{3}{6} = \frac{4}{8} = \frac{5}{10}$$

$$\Delta STU \sim \Delta JHG$$

c)

$$\angle C = \angle R$$

$$\angle D = \angle P$$

$$\angle E = \angle Q$$

$$\Delta CED \sim \Delta RPQ$$

d)

Not

5. In each diagram, identify two similar triangles. Explain why they are similar.

$$\angle F = \angle K$$

$$\angle G = \angle J$$

$$\angle H = \angle H$$

$$\triangle FGH \sim \triangle KJH$$

shortest

$$\frac{CE}{CA} = \frac{DC}{BC} = \frac{DE}{BA}$$

$$\frac{3}{6} = \frac{5}{10} = \frac{6}{12}$$

$$\triangle DCE \sim \triangle CAB$$

6. Determine the length of AB in each pair of similar triangles.

$$\frac{AB}{DE} = \frac{AC}{DF}$$

$$\frac{x}{12} = \frac{5}{10}$$

$$x = 6$$

Draw the two triangles separately!

180°

$$\frac{AB}{CD} = \frac{BE}{DE}$$

$$\frac{x}{2} = \frac{10}{2.5} \quad (2)$$

$$x = 8$$

Using Similar Triangles to Solve Problems...

Solve for x...

Using shadows to find heights

$$\frac{?}{1.8} = \frac{4}{2.4}$$

$$x = 3m$$

George is 1.7 m tall. His shadow is 3 m long. He is standing beside a tree that has a shadow that is 8 m long. How tall is the tree? Sketch

$$\frac{x}{1.7} = \frac{8}{3}$$

$$x = 4.53m$$

Find the distance
across the river

$$\frac{AB}{ED} = \frac{AC}{EC}$$

$$\frac{x}{98.3} = \frac{28.9}{73.2}$$

$$x = 38.81\text{ m}$$
