

part of 10, 13, 14, 15

10.

Animal Plant

- cell membrane is most outer layer.

- cell wall

chloroplasts

- nucleus

mitochondria

nucleus

endo. ret.

endo. ret.

Plant

Anim

- cell wall

- chloroplast

- vacuole

- mitochondria

- nucleus

- end. ret.

- cytoplasm

- cell membrane

13. You would have to take a microscope to it, and if it had all the parts of the cell, it would be living.

14. If humans and trees were only made of a couple cells, we would not be living for very long. In order for things to get bigger, they get more and more cells. Each cell and part has a job to do, and if there were only 1 cell, it would be too much work. Ex. Kitty pool

15. This would not be possible because an amoeba is only 1 cell and is microscopic, and it would not grow to a man eating size. Plus, nothing like that could grow like a size like that.

Class Work

You may need to read the sections beside the questions.

Answer in full sentence form
