Linear Equations and Graphing

$$\begin{array}{l} \text{10\% of } 60 = 6 \\ \times 3 \quad \quad \quad \downarrow \times 3 \\ \text{30\% of } 60 = 18 \end{array}$$

$$10\% = 6 \times 3 = 18$$

Section 6.1

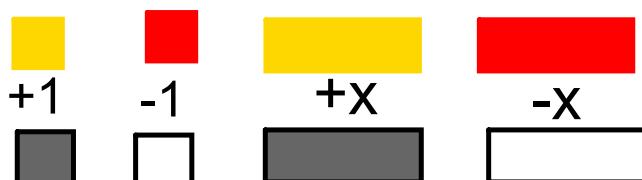

Solving Equations using Algebra Tiles

Remember:

	$+1$		$+x$ shaded any positive variable (x, n, \dots)
	-1		UNshaded $-x$ any negative variable ($-x, -n, \dots$)

Also remember that a positive and a negative together gives 0.

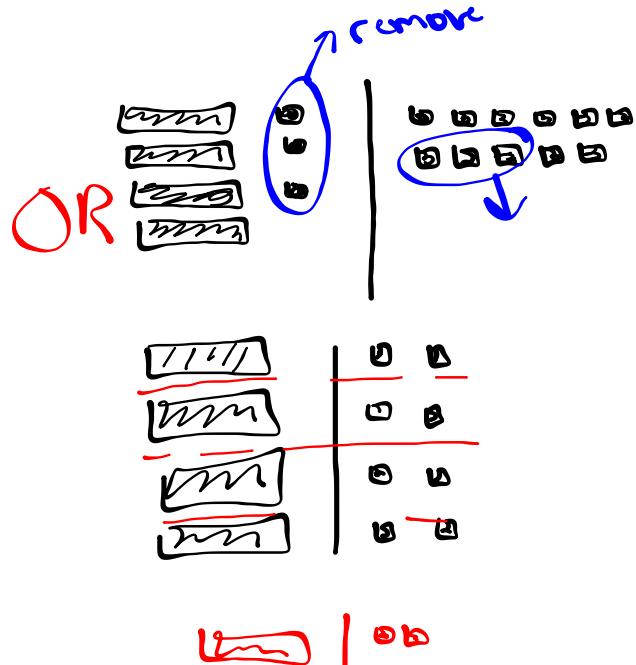

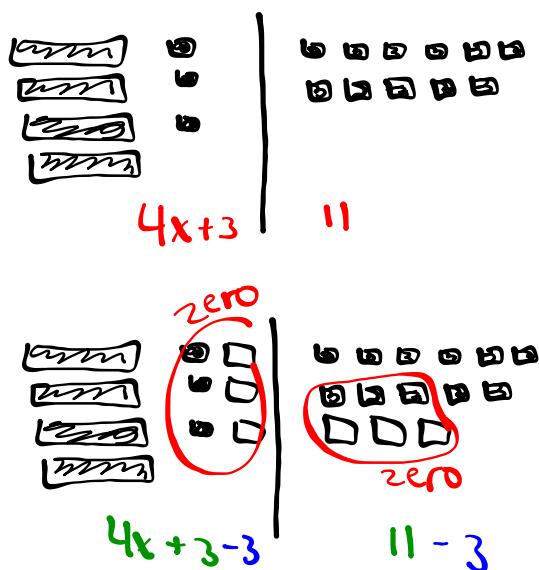

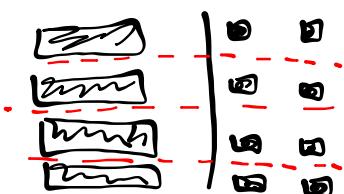

This is what I use

Use algebra tiles to solve the equations. Verify the solutions.

$$1. 4x + 3 = 11$$

model what is lcfd

$$\frac{4x}{4} = \frac{8}{4}$$

$$x = 2$$

$$3x - 4 = 2$$

$3x - 4 = 2$

$3x - 4 + 4 = 2 + 4$

$3x = 6$

$x = 2$
