Exponents

Whenever you have an exponent of 2, it is said to be squared. 3^2 might be read as 3 squared.

Whenever you have an exponent of 3, it is said to be cubed. 5^3 might be read as 5 cubed.

If the base is raised to the exponent 1, then the answer will always be the base itself.

examples: $15^1 = 15$

$24^1 = 24$

$6893^1 = 6893$

If the base is raised to the exponent 0, then the answer will always be 1.

examples: $26^0 = 1$

$147^0 = 1$

$945^0 = 1$

^

$$(756)^0 = 1$$

How do you know if a given area will make a square?

You will form a square if 2 of the factors are the same, for example an area of 25 cm^2 forms a square because $25 = 5 \times 5$

Square

$$\begin{aligned}\text{Area of square} &= b \times h \\ &= x \cdot x \\ &= x^2\end{aligned}$$

Squares and Perfect Squares

What is the area of each below?
Are they squares? Why or why not?

$$\begin{aligned} A &= L \times W \\ &= 8 \times 5 \\ &= 40 \text{ cm}^2 \end{aligned}$$

Not a square,
sides are not equal

$$\begin{aligned} A &= L \times W \\ &= 9 \times 9 \\ &= 81 \text{ cm}^2 \end{aligned}$$

Square, all
sides are

$$\begin{aligned} A &= L \times W \\ &= 2 \text{ cm} \times 2 \text{ cm} \\ &= 4 \text{ cm}^2 \end{aligned}$$

Square all sides

Ex 2) Can you form squares with the following areas?

- (a) 18 cm^2 (b) 25 cm^2 (c) 100 cm^2 (d) 60 cm^2

a) No, there is no number you can multiply by itself to get 18

b) Yes, forms a square, $5 \times 5 = 25$

c) Yes because $10 \times 10 = 100$

d) No, can not form a square, there is no number you multiply by itself to get 60

How do you know if a given area will make a square?

You will form a square if 2 of the factors are the same, for example an area of 25 cm^2 forms a square because $25 = 5 \times 5$

Notes

"To Square a number" - Multiplying a number by itself

Example: "The square of 5" is $5 \times 5 = 25$

Thus

$$5^2 = 25$$

$$5^2 = 5 \times 5 = 25$$

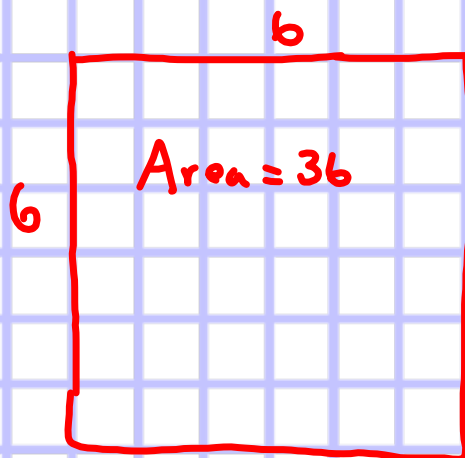

25 is a square number
or Perfect Square

Example 4:

Show that 36 is a square number. Use a diagram, symbols and words.

use graph paper

↓
 6×6

Solution:

Draw a square with area 36 square units

Side length = 6 units

Then, $36 = \underline{6} \times \underline{6} = \underline{6}^2$

Words: Thirty-six is 36 squared

NOTES:

How can you find all of the perfect squares of the numbers between 1 and 250?

Multiply the same numbers to get a perfect square.

Side length	L x W	Perfect Square (Area)
1	1 x 1 =	1
2	2 x 2 =	4
3	3 x 3 =	9
4	4 x 4 =	16
5	5 x 5 =	25
6	6 x 6 =	36
7	7 x 7 =	49
8	8 x 8 =	64
9	9 x 9 =	81
10	10 x 10 =	100
11	11 x 11 =	121
12	12 x 12 =	144
13	13 x 13 =	169
	14 x 14 =	196
	15 x 15 =	225

 36, 49, 64,
 81, 100, 121,
 144, 169, 196,
 225

Ex. 5) A square has area of 144 cm^2 . Find the perimeter of the square.

(Always include a diagram...doesn't have to be on graph paper if it doesn't ask for graph paper....so sketch)

$$144 = 12 \times 12$$

↑ ↑

$$\begin{aligned} \text{Perimeter} &= \text{side} + \text{side} + \text{side} + \text{side} \\ &= 12\text{cm} + 12\text{cm} + 12\text{cm} + 12\text{cm} \\ &= 48\text{cm} \end{aligned}$$
