

Warm Up Grade 8

April 25, 2019

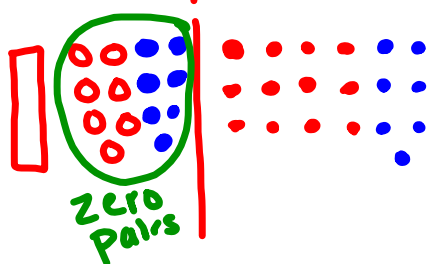

Model and solve

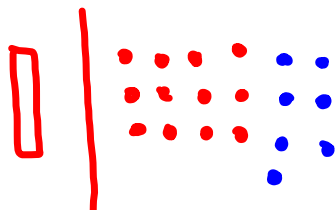

$$-x - 7 = 12$$

$$-x - 7 = 12$$

$$-x - 7^{+7} = 12^{+7}$$

$$\frac{-x}{-1} = \frac{19}{-1}$$

$$x = -19$$

pg 324

8. $n =$ the number

$$6n - 3 = 21$$

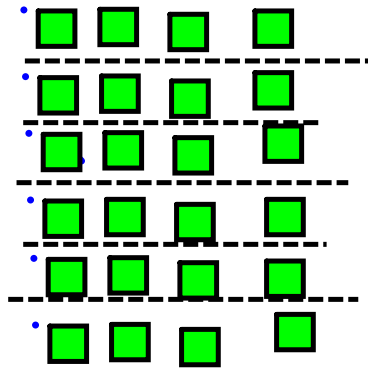

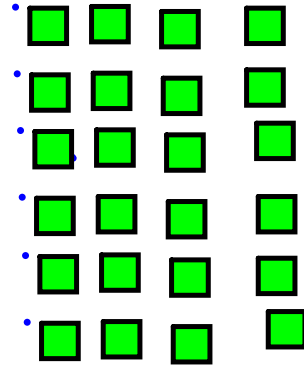

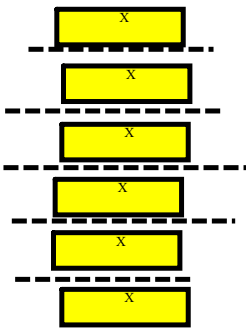

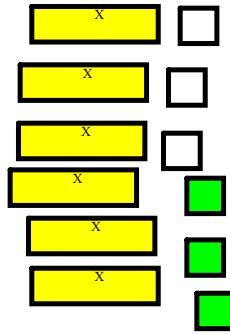

$$6n - 3 + 3 = 21 + 3$$

$$6n = 24$$

$$n = 4$$

$$\begin{array}{r} \text{LS} \\ 6n - 3 \\ 6 \times 4 - 3 \\ 24 - 3 \\ 21 \end{array}$$

$$\begin{array}{r} \text{RS} \\ 21 \end{array}$$

The number is 21.

9. $n =$ number of cards

$$3n + 4 = 22$$

$$3n + 4 - 4 = 22 - 4$$

$$3n = 18$$

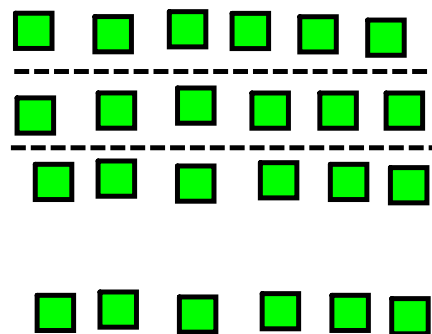

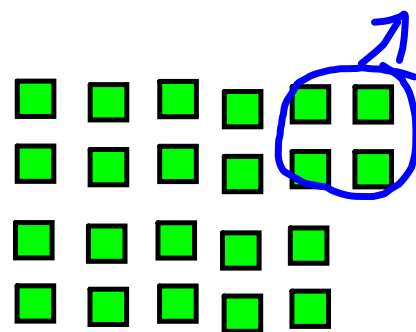

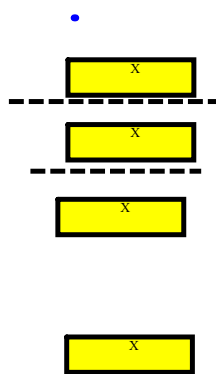

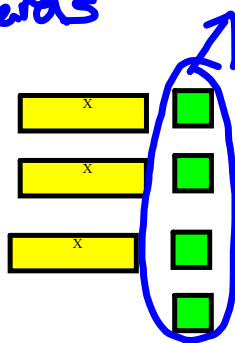

$$\frac{3n}{3} = \frac{18}{3}$$

$$n = 6$$

$$\begin{array}{r} \text{LS} \\ 3n \quad 4 \\ 3 \times 6 + 4 \\ 18 + 4 \\ 22 \end{array}$$

$$\begin{array}{r} \text{RS} \\ 22 \end{array}$$

she had 6 cards in her hand

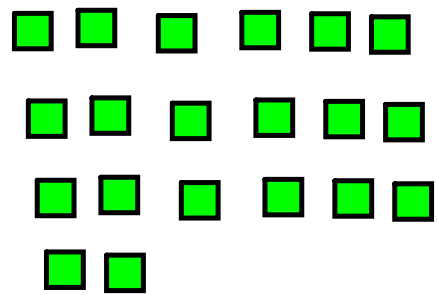

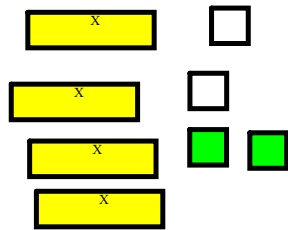

10a) No he isn't correct, he has +2 instead of -2

(or he modeled $4x+2=18$, not $4x-2=18$)

$$4x - 2 = 18$$

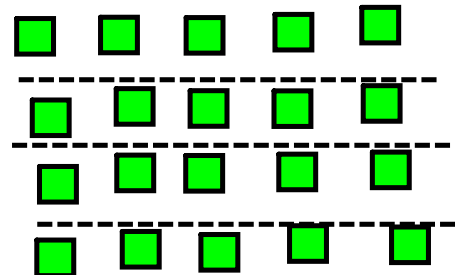

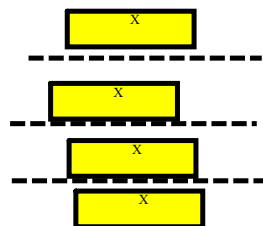

$$4x - 2 + 2 = 18 + 2$$

$$4x = 20$$

$$\frac{4x}{4} = \frac{20}{4}$$

$$x = 5$$

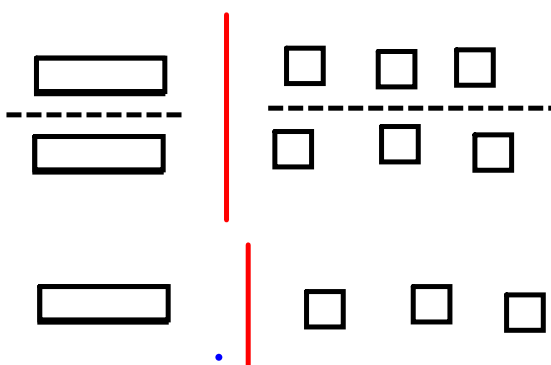

$$11 a) -2x = -6$$

$$\frac{-2x}{2} = \frac{-6}{2}$$

$$-x = -3$$

$$x = 3$$

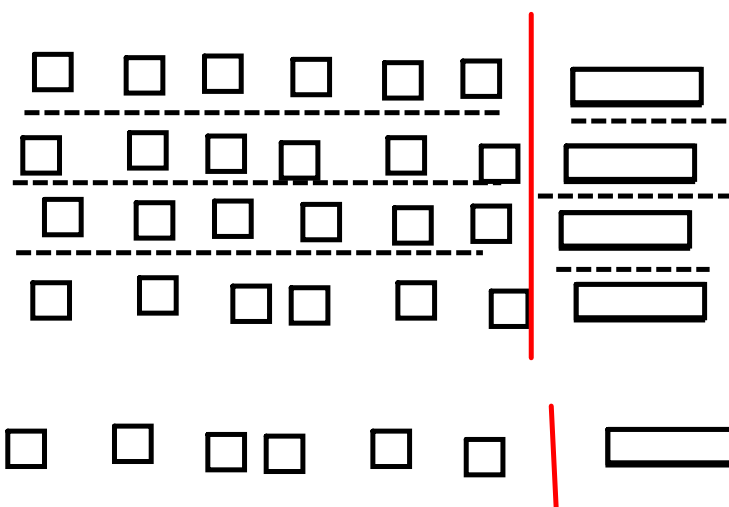

$$c) -24 = -4x$$

$$\frac{-24}{4} = \frac{-4x}{4}$$

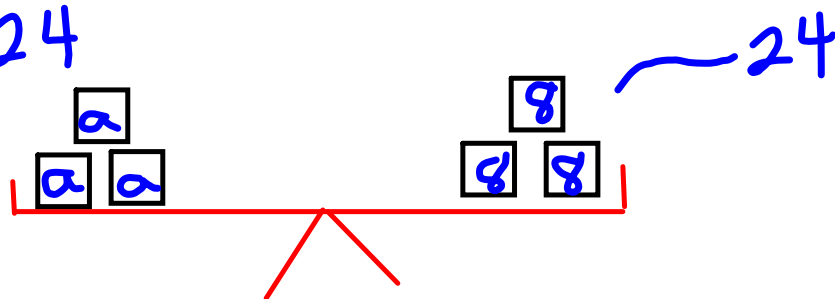

$$-6 = -x$$

$$6 = x$$

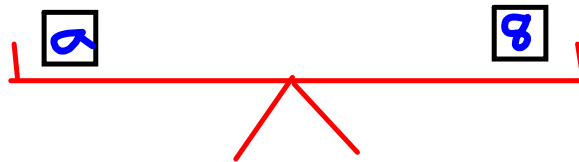

2. a) On the third diagram, she has 4 a instead of $3a$

$$3a = 24$$

$$a = 8$$

$$\begin{array}{l} \text{LS} \\ 3a + 5 \\ 3 \times 8 + 5 \\ 24 + 5 \\ 29 \end{array}$$

$$\begin{array}{l} \text{RS} \\ 29 \end{array}$$

$$13a - 2x + 3 = 13$$

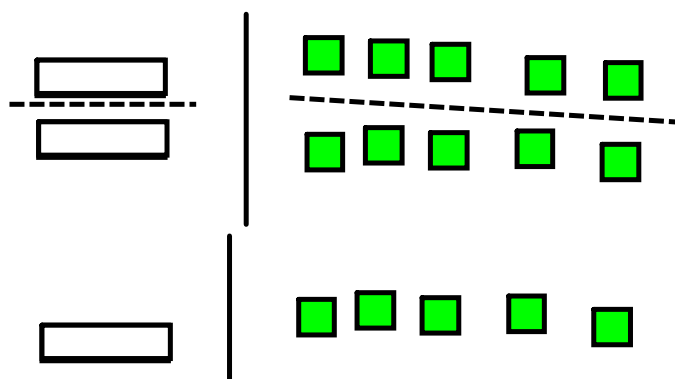

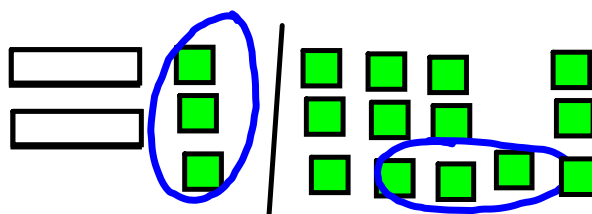

$$-2x + 3 - 3 = 13 - 3$$

$$-2x = 10$$

$$\frac{-2x}{2} = \frac{10}{2}$$

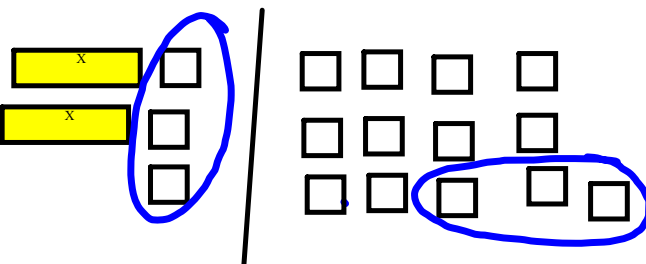

$$-x = 5$$

$$x = -5$$

$$c) 2x - 3 = -13$$

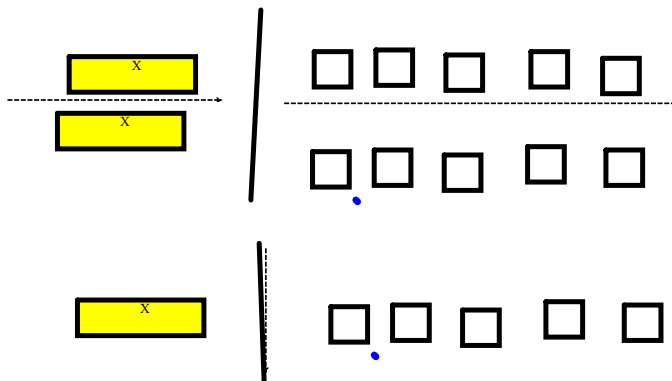

$$2x - 3 - (-3) = -13 - (-3)$$

$$2x = -10$$

$$\frac{2x}{2} = \frac{-10}{2}$$

$$x = -5$$

Solving Equations using Algebra

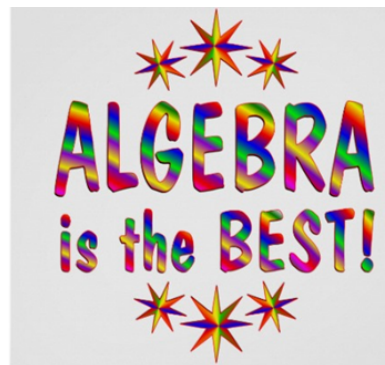

To solve an equation, we need to isolate the variable on one side of the equation.

To do this, we get rid of the numbers on that side of the equation.

When we solve an equation using algebra, we must also preserve the equality.

Whatever we do to one side of the equation, we must do to the other side, too.

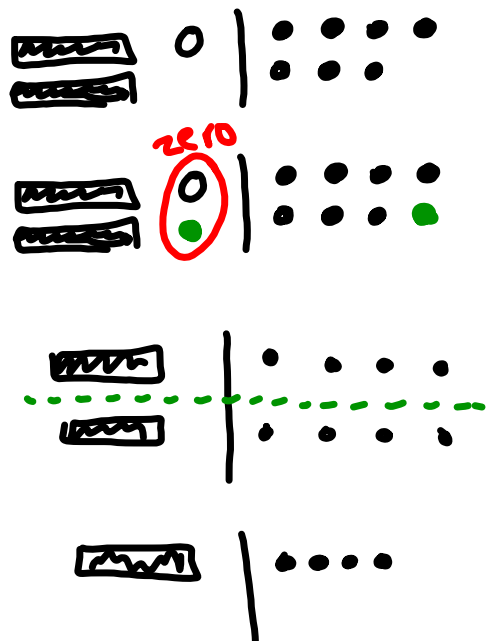

Whatever we do to one side of the equation, we must do to the other side, too.

Solve using algebra tiles then solve by using algebra

a) $2y - 1 = 7$

model

algebra

with algebra whatever you want to get rid of you do the opposite operation to it

$$2y - 1 = 7$$

$$2y - \cancel{1} = 7 + 1$$

$$2y = 8$$

$$\frac{\cancel{2}y}{2} = \frac{8}{2}$$

$$\boxed{y = 4}$$

b) $2 + 3a = -4$

Just algebra

$$\cancel{2} + 3a = -4 - 2$$

$$3a = -6$$

$$\frac{\cancel{3}a}{3} = \frac{-6}{3}$$

$$a = -2$$

Getting a Fraction or a Decimal as an Answer is OK

Use algebra to solve the equation. Then verify the solution.

$$16t - 69 = -13$$

$$16t - \cancel{69} + 69 = -13 + 69$$

$$16t = 56$$

$$\frac{16t}{16} = \frac{56}{16}$$

$$t = 3.5$$

Brad charges \$4 for each bag of garbage, and \$7 cleaning gutters. On Friday, Brad cleaned 1 gutter and took out the garbage. He earned \$19. How many bags of garbage did he take out?

let b represent # of bags
 E is Brad's earnings

Key words
 for each
 for every
 per

- a) Write an equation to represent this problem?
 b) Solve the equation using algebra.
 c) Verify the solution.

$$a) E = 4b + 7$$

$$b) 19 = 4b + 7$$

$$19 - 7 = 4b + 7 - 7$$

$$12 = 4b$$

$$\frac{12}{4} = \frac{4b}{4}$$

$$\boxed{3 = b}$$

He took out 3 bags of garbage to make \$19.
