

Warm Up Grade 8

April 26, 2019

May 9<sup>th</sup>  
test  
Thursday

Jack and Diane went to the movies.  
They each paid the same amount for an admission ticket.  
Together, they spent \$12 on snacks.  
The total cost of admission and snacks for Jack and Diane was \$26.  
How much was each admission ticket?

- a) Choose a variable.  
Write an equation you could use to solve this problem.
- b) Use a model to solve the equation.
- c) Verify the solution.

let "a"  
represent  
admission  
cost

$$2a + 12 = 26$$

Algebra

$$2a + 12 = 26$$

$$2a + \cancel{12} - \cancel{12} = 26 - 12$$

$$2a = 14$$

$$\frac{2a}{2} = \frac{14}{2}$$

$$a = 7$$

Jack and Diane both  
paid \$7 for admission.

pg 330

1. When the numbers are larger it is easier to use algebra rather than tiles or scales
2. It is easier to verify using algebra when the answer is a fraction or a decimal.
3. You have to keep the balance and do the same thing on both sides.
4. Student's choice  
(Most would chose a decimal, and use a calculator).

$$5a) 2x - 1 = 7$$

$$2x - 1 + 1 = 7 + 1$$

$$2x = 8$$

7. a) mistake

In 2<sup>nd</sup> step, the student added and subtracted 15 from the right side.

$$\begin{aligned}
 -3x + 15 &= 30 \\
 -3x + 15 - 15 &= 30 - 15 \\
 -3x &= 15 \\
 \frac{-3x}{3} &= \frac{15}{3} \\
 -x &= 5 \\
 x &= -5
 \end{aligned}$$

b) mistake, student said  $7 - 1 = 8$  instead of 6

$$\begin{aligned}
 7 &= 1 + 2n \\
 7 - 1 &= 1 + 2n - 1 \\
 6 &= 2n \\
 \frac{6}{2} &= \frac{2n}{2} \\
 3 &= n
 \end{aligned}$$

c) mistake - in 3<sup>rd</sup> step, the student should have divided by 2, and he mult. by 2

$$\begin{aligned}
 3 + 2t &= 4 \\
 3 + 2t - 3 &= 4 - 3 \\
 2t &= 1 \\
 \frac{2t}{2} &= \frac{1}{2} \\
 t &= \frac{1}{2}
 \end{aligned}$$

d) No mistake

$$\begin{aligned}
 8a) \quad 2x + 5 &= -7 \\
 2x + 5 - 5 &= -7 - 5 \\
 2x &= -12 \\
 \frac{2x}{2} &= \frac{-12}{2} \\

9. a)  $n =$  number of week

$$24n + 72 = 288$$

$$24n + 72 - 72 = 288 - 72$$

$$24n = 216$$

$$\frac{24n}{24} = \frac{216}{24}$$

$$n = 9$$

L	R
$24n + 72$	$288$
$24 \times 9 + 72$	
$216 + 72$	
$288$	

In 9 weeks, Navid will have the money in her account.

10.

a)  $n =$  number of students

$$2n + 85 = 197$$

$$2n + 85 - 85 = 197 - 85$$

$$2n = 112$$

$$\frac{2n}{2} = \frac{112}{2}$$

$$n = 56$$

L	R
$2n + 85$	$197$
$2 \times 56 + 85$	
$112 + 85$	
$197$	

56 students attended the dance.
