$$14.984 \div 4$$

$$\begin{array}{r} 3.735 \\ 4 \overline{) 14.940} \\ \underline{-12} \\ 29 \\ \underline{-28} \\ 14 \\ \underline{-12} \\ 20 \\ \underline{-20} \\ 0 \end{array}$$

13. In good weather, Hannah rides her bike to school and back each day.
 One week, Hannah rode her bike on 4 days.
 That week, Hannah rode 10.832 km in total.
 The following week, she rode her bike all 5 days.
 How far did Hannah ride the second week?

Find km per day

$$\begin{array}{r} 2.708 \\ 4 \overline{) 10.832} \\ \underline{-8} \\ 28 \\ \underline{-28} \\ 03 \\ \underline{-03} \\ 0 \end{array}$$

Hannah drives 2.708 km each day

For 5 days

$$\begin{array}{r} 2.708 \\ \times 5 \\ \hline 13.540 \end{array}$$

Hannah drives 13.54 km in 5 days

This is the one I use

Dividing decimals by a whole number

$$\begin{array}{r} 13.45 \\ \text{Dividend} \end{array} \div \begin{array}{r} 4 \\ \text{Divisor} \end{array}$$

Same as what we have been doing with long division.

Carrying zeros

- Divide the decimal number by considering it as a whole number by the given whole number.

$$4 \overline{) 13.45}$$

Always estimate to see if the quotient is reasonable

- 1x4=4
- 2x4=8
- 3x4=12
- 4x4=16
- 5x4=20
- 6x4=24
- 7x4=28
- 8x4=32
- 9x4=36

- Mark the decimal point in the quotient such that it has the same number of decimal places as in the decimal number (dividend).

$$\begin{array}{r} 3.3625 \\ 4 \overline{) 13.4500} \\ \underline{-12} \\ 14 \\ \underline{-12} \\ 25 \\ \underline{-24} \\ 10 \\ \underline{-8} \\ 20 \\ \underline{-20} \\ 0 \end{array}$$

Then divide normally

Then repeat

If you have a remainder, you can always add zeros to the end of dividend, and it does not change the number.

No remainders but decimal parts

$$\begin{array}{r} 1.8934 \\ 5 \overline{) 9.4670} \\ \underline{-5} \\ 44 \\ \underline{-40} \\ 46 \\ \underline{-45} \\ 17 \\ \underline{-15} \\ 20 \\ \underline{-20} \\ 0 \end{array}$$

$$9.467 \div 5 = 1.8934$$
