1) What is the probability of spinning the spinner twice and getting red and a green?

$$\begin{aligned}
 P(\text{Red and Green}) &= P(\text{Red}) \times P(\text{G}) \\
 &= \frac{\# \text{Red}}{\text{Total}} \times \frac{\# \text{Green}}{\text{Total}} \\
 &= \frac{1}{6} \times \frac{2}{6} \\
 &= \frac{2}{36} \\
 &= \frac{1}{18}
 \end{aligned}$$

2) What is the probability of spinning the spinner twice and getting red and a pink?

$$\begin{aligned}
 P(\text{Red and Pink}) &= P(\text{Red}) \times P(\text{Pink}) \\
 &= \frac{\# \text{Red}}{\text{Total}} \times \frac{\# \text{Pink}}{\text{Total}} \\
 &= \frac{1}{6} \times \frac{0}{6} \\
 &= \frac{0}{36} \\
 &= 0

b) If the marbles are not replaced the events are not independent, therefore you can not use the rule.

In word problems some words that can be used to suggest an event is INDEPENDENT is:

Replace or returned

$$P(A \text{ and } B) = P(A) \times P(B)$$

Ex) What is the probability of drawing a 2 from a deck of cards then replacing the card and drawing a red 5 from a deck of cards?

The rule for independent events applies when you have more than 2 events,

$$P(A \text{ and } B \text{ and } C \text{ and } D) \\ = P(A) \times P(B) \times P(C) \times P(D)$$

Ex) What is the probability of tossing a head on a coin, rolling a 2 on a die and spinning a spinner that lands on purple?

$$P(\underline{\text{Head}} \text{ AND } \underline{2} \text{ AND } \underline{\text{Purple}}) \\ = P(H) \times P(2) \times P(\text{purple}) \\ = \frac{1}{2} \times \frac{1}{6} \times \frac{1}{3} \\ = \frac{1}{36}$$

A bag contains 3 orange marbles, 4 blue marbles and 5 green marbles.

1) Tim removes 1 marble without looking record the colour, then return the marble to the bag and flips a coin.

a) What is the probability the he picks a blue marble and flips a head?

b) If he were to pick two marbles and flip the coin once then what is the probability that he picks a green and blue marble and flips a tails?

2) Same bag of marbles but picks 3 marbles each time

a) What is the probability of picking 3 marbles and all are not orange?

d) What is the probability of a green, black and orange?
