

Math Grade 6,7, 8 and NRF 10

(Each lesson is designed to take 2 days to complete)

(But work at your own pace)

- At this time, our Education Minister has indicated that we may not be back to regular classes until September 2020, so we are asked to have a new approach to teaching with e-learning. I would encourage you to continue working on your math outcomes for the remainder of this school year. I have made videos of me teaching each lesson, all you need to do click on the link and follow along. If you don't want to watch the video I have attached my smart lesson as well for you to look at (one that is blank for you to try and one that has the solutions worked out).
- The class lessons will be posted as follow:
 - o Links to video:
 - o PDF of blank smart lesson:
 - o Completed lesson PDF:

The video and lessons are very similar to how my classes runs (along with warm ups and mistakes) the only difference is you can pause me or shut me off whenever you want. Please pause the video and try the questions on your own when asked.

Classwork/Homework:

- I have included the textbook questions that I would have assigned in class at the end of each PDF file and **THIS IS OPTIONAL**. You can pick and choose what you want to do. So please watch to the videos to the very end and read the whole PDF file to the last slide.
- If you have any questions, you can contact me through email and the remind app once you get this set up (see details in the PDF file about Remind app). I will check these often throughout the day (hourly), but you may have to be patient.
 - o Email: melissa.okeefe@nbed.nb.ca
