b) Contains 1350 ml of water  
depth = ?

$$1350 \text{ ml} = \underline{1350} \text{ cm}^3$$

$$\begin{aligned}
 \text{Vol} &= A_{\text{base}} \times h \\
 1350 &= 75 \times h
 \end{aligned}$$

$$\frac{1350}{75} = 18$$

The depth would be  
18 cm

$$\text{c) } \frac{1350}{2250} = 0.6 \text{ or } 60\% \text{ water}$$

15. Volume =  $198 \text{ cm}^3$   
 A<sub>base</sub> = 18

Vol = A<sub>base</sub> × h  
 $198 = 18 \times h$

$\frac{198}{18} = h$

$11 = h$

$18 = \frac{b \times h}{2}$

$36 = b \times h$

### Surface Area of a Cylinder

When finding the surface area of a cylinder, you still have to find the area of the faces then add them. However, what are the shapes of the faces?

The top and bottom are both circles.

If you unroll the curved face of the cylinder, you will get a rectangle.

One side of the rectangle is the height of the cylinder,  
and  
the other side of the rectangle is the circumference of the circle

Step 1) Find the area of the circle  $A_c = \pi r^2$

Step 2) Find the circumference of the circle  $C_r = 2\pi r$

Step 3) Find the area of the rectangle  $A = b \times h$

$$A_r = (2\pi r) H$$

= circumference x h

Step 4) Find the Total SA = 2Circles + Rectangle

$$SA_{cyl} = 2A_c + A_r$$

$$SA_{cyl} = 2\pi r^2 + 2\pi r h$$

$$\begin{aligned} \boxed{\text{Total SA}_{\text{cyl}} =} & \quad 2\text{Circles} \quad + \quad \text{Rectangle} \\ = & \quad 2 \pi r^2 \quad + \quad 2 \pi r H \\ = & \quad [2 \times 3.14 \times \underline{r} \times \underline{r}] + [2 \times 3.14 \times \underline{r} \times H] \end{aligned}$$

$$\text{Total SA}_{\text{cyl}} = 2\text{Circles} + \text{Rectangle}$$

$$= 2 \pi r^2 + 2 \pi r H$$

$$= [2 \times 3.14 \times r \times r] + [2 \times 3.14 \times r \times H]$$

Fill in the radius and the Height of the cylinder

$$= [2 \times 3.14 \times 8\text{cm} \times 8\text{cm}] + [2 \times 3.14 \times 8\text{cm} \times 12\text{cm}]$$

Use a calculator and

=

$$= [401.92 \text{ cm}^2] + [602.88 \text{ cm}^2]$$

$$= 1004.8 \text{ cm}^2$$

Find the surface area

**Your Turn**

$$\begin{aligned} \text{Total SA}_{\text{cyl}} &= 2\text{Circles} + \text{Rectangle} \\ &= 2 \pi r^2 + 2 \pi r H \\ &= [2 \times 3.14 \times r \times r] + [2 \times 3.14 \times r \times H] \end{aligned}$$

Fill in the radius and the Height of the cylinder

$$= [2 \times 3.14 \times 15\text{cm} \times 15\text{cm}] + [2 \times 3.14 \times 15\text{cm} \times 25\text{cm}]$$

Use a calculator and multiply each bracket separately

$$\begin{aligned} &= [1413 \text{ cm}^2] + [2355 \text{ cm}^2] \\ &= 3768 \text{ cm}^2 \end{aligned}$$
