

### 8.3 Extending our vision

Provide examples of optical technologies that enable scientific research and relate personal activities associated with such technologies.

Examples of Optical Technologies

Telescope

Camera

Microscope

Reading glasses

Binoculars

Contact lenses

## Assignment

Using the following examples of optical technologies from the previous page create a timeline of the first invented including who invented the technology.

A bit of research will have to be done on each technology in order to complete this.

As you are doing your research think about all the opportunities that these technologies have awarded us.
