Homework Solutions

The is not  $20 \text{ cm}^2$ , the student use the 5 which is the slant height instead of using the perpendicular height.

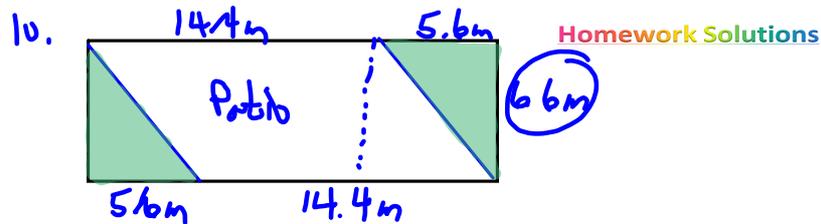

9. They will both need the same amount of paint

$A_{\text{rectangle}} = b \times h = l \times h$

$A_{\text{parallelogram}} = b \times h = l \times h$

They both have the same base and height

$$\begin{aligned} \text{a) } A_{\text{patib}} &= b \times h \\ &= 14.4 \times 6.6 \\ &= 95.04 \text{ m}^2 \end{aligned}$$

$$\begin{aligned} \text{b) } \text{Area of Patib and Garden} &= l \times w \\ &= 20 \times 6.6 \\ &= 132 \text{ m}^2 \end{aligned}$$

c) To find the area of the gardens subtract the area of the patib from the total area

$$\begin{array}{r} 132.00 \\ - 95.04 \\ \hline 36.96 \end{array}$$

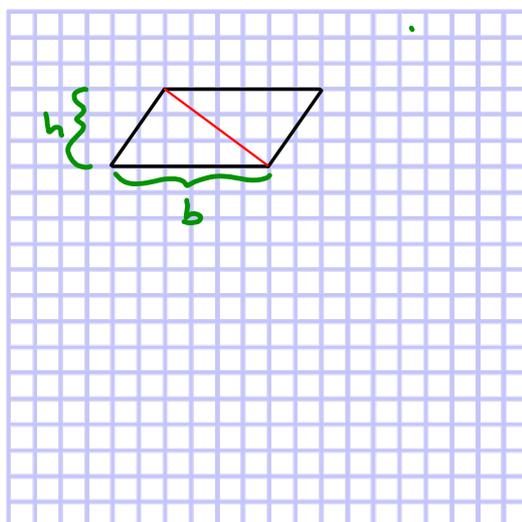

$$\text{Area of Gardens} = 36.96 \text{ m}^2$$

When we draw a diagonal in a parallelogram, we make 2 congruent triangles.

Congruent triangles have the same area.

The area of the two congruent triangles is equal to the area of the parallelogram.

So, the area of one triangle is  $\frac{1}{2}$  the area of the parallelogram.

All rectangles or parallelograms can be split into two equal triangles.  
 The formula to find the Area of a rectangle or parallelogram can be Base x Height, so to find the area of a triangle half its size would have to be

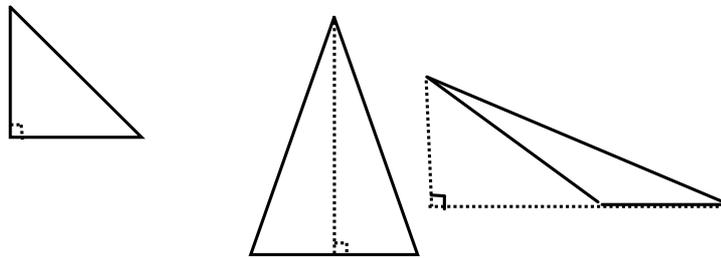

$$\text{Area of Triangle} = \frac{\text{Base} \times \text{Height}}{2}$$

**TRIANGLES**

All triangles have three sides and three angles.

Any side of a triangle can be its base.

The height of the triangles must be perpendicular to its base and must intersect the vertex opposite the base.

Find the Area for each of the following triangles:

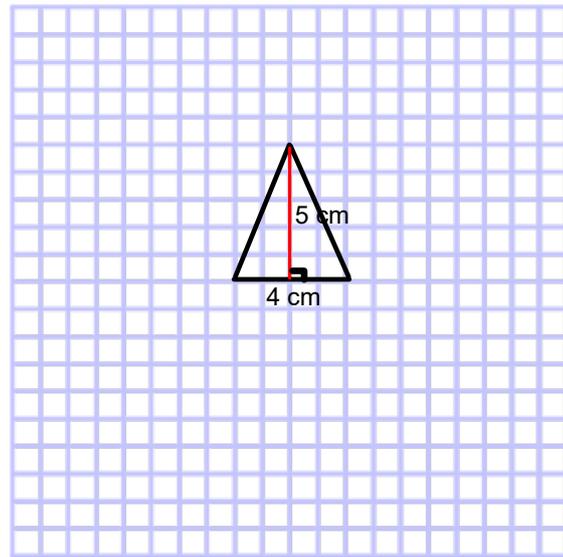

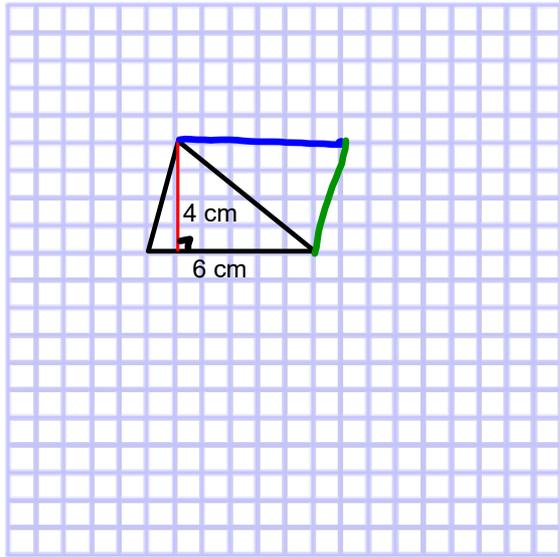

A)  $b = 4\text{cm}$   
 $h = 8\text{cm}$   
 $A_{\Delta} = \frac{b \times h}{2}$   
 $= \frac{(4\text{cm}) \times (8\text{cm})}{2}$   
 $= \frac{32\text{cm}^2}{2}$   
 $A_{\Delta} = 16\text{cm}^2$

B)  $3\text{cm}$   
 $4\text{cm}$   
 $5\text{cm}$   
 $A_{\Delta} = \frac{b \times h}{2}$   
 $= \frac{3\text{cm} \times 4\text{cm}}{2}$   
 $= \frac{12\text{cm}^2}{2}$   
 $= 6\text{cm}^2$

C)  $5\text{cm}$   
 $5\text{cm}$   
 $2.5\text{cm}$   
 $A_{\Delta} = \frac{b \times h}{2}$   
 $= \frac{5\text{cm} \times 5\text{cm}}{2}$   
 $= \frac{25\text{cm}^2}{2}$   
 $= 12.5\text{cm}^2$
