

Warm Up Grade 7

Dec.12

Use mental math

1)  $12 \times 5$   
60

2)  $151 - 29$

$$\begin{array}{r} 151 - 30 \\ \underline{121} \phantom{- 1} \\ 122 \end{array}$$

1 too many

3)  $24 \times 1.5$

↓ half ↓ double  
 $12 \times 3$   
36

↗ 1 whole ↘ half  
 $24 + 12$   
36

From last day

1) Find the height

area =  $165 \text{ m}^2$

$$h_{\Delta} = \frac{2(A)}{b}$$

$$h_{\Delta} = \frac{2(165 \text{ m}^2)}{15 \text{ m}}$$

$$h_{\Delta} = \frac{330 \text{ m}^2}{15 \text{ m}}$$

$$h_{\Delta} = 22 \text{ m}$$

## Homework Solutions

## Homework Solutions Page 145 -146 # 1, 2, 4

5. Use the given area to find the base or height of each triangle.

How could you check your answers?

a) Area =  $18 \text{ cm}^2$

$$A = \frac{b \times h}{2}$$

$$18 = \frac{9 \times \underline{\quad}}{2}$$

$$\frac{36}{2} = \frac{9 \times h}{2}$$

$$h = 4$$

b) Area =  $32 \text{ m}^2$

$$A = \frac{b \times h}{2}$$

$$32 = \frac{b \times 4}{2}$$

$$64 = b \times 4$$

$$\frac{64}{4} = b$$

$$16 = b$$

c) Area =  $480 \text{ mm}^2$

$$A = \frac{b \times h}{2}$$

$$480 = \frac{30 \times \underline{\quad}}{2}$$

$$480 = 15 \times h$$

$$\frac{480}{15} = h$$

$$32 = h$$

6. Use 1-cm grid paper.

a) Draw 3 different triangles with each base and height.

i) base: 1 cm; height: 12 cm

ii) base: 2 cm; height: 6 cm

iii) base: 3 cm; height: 4 cm

b) Find the area of each triangle you drew in part a.

What do you notice?

$$A = \frac{b \times h}{2}$$

$$= \frac{2 \times 6}{2}$$

$$= 6 \text{ cm}^2$$

$$A = \frac{b \times h}{2}$$

$$= \frac{3 \times 4}{2}$$

$$= 6 \text{ cm}$$

7. On 1-cm grid paper, draw two different triangles with each area below.  
Label the base and height each time.  
How do you know these measures are correct?

a) 14 cm<sup>2</sup>

b) 10 cm<sup>2</sup>

c) 8 cm<sup>2</sup>

$$b) A = \frac{b \times h}{2}$$

$$10 = \frac{? \times ?}{2}$$

$$a) A = 14$$

$$\text{so } b \times h = 28$$

- 1 x 28
- 2 x 14
- 4 x 7

$$\frac{b \times h}{2} = 14$$

$$\frac{? \times ?}{2} = 14$$

$$b) A = 10$$

$$\text{so } b \times h = 20$$

- 1 x 20
- 2 x 10
- 4 x 5

$$c) A = 8$$

$$\text{so } b \times h = 16$$

8. a) Draw any triangle on grid paper.

What happens to the area of the triangle in each case?

- i) the base is doubled
- ii) both the height and the base are doubled
- iii) both the height and the base are tripled

b) What could you do to the triangle you drew in part a to triple its area?

Explain why this would triple the area.

$$b=2, h=4$$

$$A = \frac{2 \times 4}{2}$$

$$= 4$$

$$a) b=4, h=4$$

$$A = \frac{4 \times 4}{2}$$

$$= 8$$

a) if the base is doubled, the area doubles

$$c) b=4, h=8$$

$$A = \frac{4 \times 8}{2}$$

$$= 16$$

If the base and height both double, then the area is 4 times larger or quadrupled

$$d) b=6, h=12$$

$$A = \frac{b \times h}{2}$$

$$= \frac{6 \times 12}{2}$$

$$= 36$$

If the base and height are both tripled, then the area is 9 times larger.

e) If you want triple the area triple either the height OR the base

2)  $A_{3\Delta} = 3 \times 3.9$   
 $= 11.7\text{m}^2$

b)  $11.7 \div 5.5 = 2.12\overline{72}$   
 buy 3 cans

Discuss pg. 149 with students

Suppose a circle was cut into 8 congruent sectors.

Sector - a part of the circle

The 8 sectors were then arranged to approximate a parallelogram.

The more congruent sectors we use, the closer the area of the parallelogram is to the area of the circle.

Here is a circle cut into 24 congruent sectors.

The 24 sectors were then arranged to approximate a parallelogram.

Circumference =  $2\pi r$

Half of Circumference =  $\frac{2\pi r}{2}$

Half of Circumference =  $1\pi r$

$A = b \times h$

= (Half the circumference)  $\times$  (r)

=  $\pi r \times r$

=  $\pi r^2$

where  $r^2 = r \times r$

### Area of a Circle

We have a formula to find the area of a circle,

$$\star \text{Area of Circle} = \pi r^2 \star \longrightarrow \text{Area of Circle} = \pi \times r \times r$$

That is the area of a circle is  $\pi$  times the radius squared (which means radius  $\times$  radius).  
 $\pi$  always = 3.14

Examples:

Find the area for each of the following:

$$r = 8 \text{ cm}$$

$$A_0 = \pi \times r \times r$$

$$= 3.14 \times 8 \text{ cm} \times 8 \text{ cm}$$

$$= 200.96 \text{ cm}^2$$

$$r = 20 \text{ cm}$$

$$A_0 = \pi \times r \times r$$

$$= 3.14 \times 20 \text{ cm} \times 20 \text{ cm}$$

$$= 1256 \text{ cm}^2$$

$$d = 30 \text{ cm} \quad \downarrow \div 2$$

$$r = 15 \text{ cm}$$

$$A_0 = \pi \times r \times r$$

$$= 3.14 \times 15 \text{ cm} \times 15 \text{ cm}$$

$$= 706.5 \text{ cm}^2$$

## Area of a Circle

We have a formula to find the area of a circle,

$$\text{Area of Circle} = \pi r^2$$

That is the area of a circle is  $\pi$  times the radius squared (which means radius x radius).

$\pi$  always = 3.14

Examples:

Find the area for each of the following:

$$\begin{aligned} A &= \pi r^2 \\ &= 3.14 \times 8 \times 8 \\ &= 200.96 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} A &= \pi \times r \times r \\ &= 3.14 \times 20 \times 20 \\ &= 1256 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} d &= 30 \\ r &= 15 \\ A &= \pi \times r \times r \\ &= 3.14 \times 15 \times 15 \\ &= 706.5 \text{ cm}^2 \end{aligned}$$

To estimate the area of a circle  $\approx 3 \times r \times r$

$$= 153.86 \text{ cm}^2$$

double r

$$r = 14$$

$$A = 3.14 \times 14 \times 14$$

$$= 615.44 \text{ m}^2$$

$$A = \pi \times r \times r$$

↓                    ↓

2r                    2r

$$= 4 \pi r \times r$$

$A_0$

$$615.44 \div 153.86$$

$$= 4 \text{ times}$$

$$2a. \quad A = \frac{b \times h}{2}$$

$$A = \frac{7 \times 6}{2}$$

$$A = \frac{42}{2}$$

$$A = 21 \text{ cm}^2$$

$$b. \quad A = \frac{5 \times 5}{2}$$

$$A = \frac{25}{2}$$

$$A = 12.5 \text{ cm}^2$$

c. A:

$$c. \quad A = \frac{b \times h}{2}$$

$$A = \frac{6 \times 4}{2}$$

$$A = \frac{24}{2}$$

$$A = 12 \text{ cm}^2$$

$$A = \frac{6 \times 4}{2}$$

$$A = 12 \text{ cm}^2$$

$$e. A = \frac{5 \times 4}{2}$$

$$A = \frac{20}{2}$$

$$A = 10 \text{ cm}^2$$

$$A = \frac{b \times h}{2}$$

$$A = \frac{1}{2} b \times h$$

$$f. A = \frac{4 \times 4}{2}$$

$$A = 8 \text{ cm}^2$$

$$\begin{aligned} A &= \frac{b \times h}{2} \\ &= \frac{4 \times 2}{2} \\ &= \frac{8}{2} \\ &= 4 \text{ cm}^2 \end{aligned}$$

$$\begin{aligned} A &= \frac{B \times H}{2} \\ &= \frac{5 \times 5}{2} \\ &= \frac{25}{2} \\ A &= 12.5 \text{ cm}^2 \end{aligned}$$

$$4a \quad A = \frac{b \times h}{2}$$
$$A = \frac{7 \times 6}{2}$$
$$A = \frac{42}{2}$$
$$A = 21 \text{ cm}^2$$

c.

$$A = b \times h$$
$$A = 6 \times 7$$
$$A = 42 \text{ cm}^2$$

$$S_a = A = 18 \text{ cm}^2$$
$$b = 9 \text{ cm}$$

$$A = \frac{b \times h}{2}$$

$$(2 \times) 18 = \frac{9 \times h}{2} (2 \times)$$

$$36 = 9 \times h$$

$$4 \text{ cm} = h$$

$$b. \quad A = 32$$

$$h = 4$$

$$A = \frac{b \times h}{2}$$

$$32 = \frac{b \times 4}{2}$$

$$64 = b \times 4$$

$$16_m = b$$

$$C.A. = 480m^2 \quad (32m)$$

$$b = 30m$$

$$480m^2 = \frac{b \times h}{2}$$

$$960m^2 = 30 \times h$$

$$32m = h$$
