

Math 8

Before we start  
Unit 1:

# Square Roots & Pythagorean Theorem

2<sup>3</sup>

# Exponents

★ Exponents are shorthand for repeated multiplication:

Ex)  $(5)(5) = 5^2 = 25$ ,  $(5)(5)(5) = 5^3 = 125$

$\underbrace{25}_{\times 5}$

★ The "exponent" stands for however many times the term is being multiplied.

Exponent

5<sup>3</sup>

(3 times)  $5 \times 5 \times 5 = 125$

★ The term that's being multiplied is called the "base".

Base → 5<sup>3</sup>

Given  $4^3$ , 4 is called the base and 3 is the exponent

★ Together,  $4^3$  is called a **power**.

$$4^3 \Rightarrow 4 \times 4 \times 4 = 64$$

$4^3$  means  $4 \times 4 \times 4 = 64$ .

$4 \times 4 \times 4$  is the expanded form. (repeated  $\times$ )

$64$  is the standard form. (answer off calculator)

$4^3$  is the exponential form (or the power).

The base is what you are multiplying by, and the exponent tells you how many times to multiply it.

|             |          |          |
|-------------|----------|----------|
| Exponential | Expanded | Standard |
|-------------|----------|----------|

|             |   |             |
|-------------|---|-------------|
| $2^5$ means | <u><math>2 \times 2 \times 2 \times 2 \times 2</math></u> | = <u>32</u> |
|-------------|---|-------------|

|                               |                       |             |
|-------------------------------|-----------------------|-------------|
| <u><math>3^3</math></u> means | $3 \times 3 \times 3$ | = <u>27</u> |
|-------------------------------|-----------------------|-------------|

|             |  |        |
|-------------|--|--------|
| $8^4$ means | <u><math>8 \times 8 \times 8 \times 8</math></u> | = 4096 |
|-------------|--|--------|

$8 \times 8 = 64$   
 $8 \times 8 \times 8 = 512$   
 $8 \times 8 \times 8 \times 8 = 4096$

Evaluate the following (Show all work)

$2 \times 2 \times 2 \times 2 \times 2$

4  $\times 2 \times 2 \times 2$

8  $\times 2 \times 2$

16  $\times 2$

32

Fill in the blanks

$6 \times 6 \times 6 \times 6$

36  $\times$  36

base 6

exponent 4

$6^4 = 1296$

power

## Calculator Button

$x^y$  or  $\wedge$  or  $y^x$

So for  $5^3$

$$5 \times^y 3$$

$$5 \wedge 3$$

$$5 y^x 3$$

$$= 125$$

$x^2$  is a special button that squares a #

(means times the number by itself)

$$3^2 = 3 \times 3$$

$$= 9$$

$x^2$

$$4^3 = 4 \times 4 \times 4$$

$\underbrace{4 \times 4}_{16} \times 4$   
 $64$

$$8^4 = 4096$$

$\wedge$   
 $8 \times 8 \times 8 \times 8$

# Homework

|     | Power | Base | Exponent | Exponential Form | Expanded Form                                    | Standard Form |
|-----|-------|------|----------|------------------|--|---------------|
| a)  | $7^3$ | 7    | 3        | $7^3$            | $7 \times 7 \times 7$                            | 343           |
| b)  |       | 9    | 4        |                  |  |               |
| c)  |       |      |          | $6^2$            |  |               |
| d)  |       |      |          |                  | $4 \times 4 \times 4 \times 4 \times 4$          |               |
| e)  | $3^5$ |      |          |                  |  |               |
| f)  |       | 10   | 4        |                  |  |               |
| g)  | $5^4$ |      |          |                  |  |               |
| h)  | $4^5$ |      |          |                  |  |               |
| i)  |       |      |          |                  | $8 \times 8 \times 8$                            |               |
| j)  |       |      |          | $3^9$            |  |               |
| k)  |       | 8    | 2        |                  |  |               |
| l)  |       |      |          |                  | $5 \times 5 \times 5 \times 5 \times 5 \times 5$ |               |
| m)  | $3^3$ |      |          |                  |  |               |
| n)  |       | 11   | 2        |                  |  |               |
| *o) | $6^4$ | 6    | 4        | $6^4$            | $6 \times 6 \times 6 \times 6$                   | 1296          |
| *p) |       | 2    | 5        | $2^5$            | $2 \times 2 \times 2$                            | 32            |

$$\frac{1^5 = 1}{2^5 = 32}$$

$$2^5 \quad 2 \wedge 5 =$$

o)  $6^{\square}$

$6^1 = 6$

$6^2 = 36$

$6^3 = 216$

$6^4 = 1296$

6
