

Warm Up Grade 7

$8 - 6 = 2$ but subtracted 6 cents too much \Rightarrow \$2.06

Use mental math.

1) $\$8.00 - \5.94

$$\begin{array}{r} 8 - 5 = 3 \\ - 0.94 \\ \hline \$ 2.06 \end{array}$$

2) $1 - \frac{5}{6}$

$$\frac{6}{6} - \frac{5}{6} = \frac{1}{6}$$

3) $43 \times 20 = 860$

$$\begin{array}{r} 7.91 \\ \cancel{8.00} \\ - 5.94 \\ \hline 2.06 \end{array}$$

5) What is the difference from an expression and an equation?

no equal sign

have = equal sign

Write an algebraic expression for each statement.

let $n \equiv$ a number

1. eight more than a number

$$n + 8$$

2. two less than seven times a number

$$7n - 2$$

3. a number divided by 6

$$n \div 6 \quad \text{or} \quad \frac{n}{6}$$

Evaluate each expression.

1. $(x) - 9$ for $x = -5$

$$\begin{aligned} & \downarrow \\ & (-5) - (9) \\ & (-5) + (-9) = \boxed{-14} \end{aligned}$$

3. $-6 + (n)$ for $n = -2$

$$\begin{aligned} & (-6) + (-2) = \boxed{-8} \\ & \text{oooooo} \\ & \text{oo} \end{aligned}$$

2. $4(p)$ for $p = 3$

$$\begin{aligned} & 4(3) \\ & = \boxed{12} \end{aligned}$$

4. $m - 2$ for $m = -3$

$$\begin{aligned} & (m) - 2 \\ & (-3) - (2) \\ & \downarrow \\ & (-3) + (-2) \\ & \boxed{-5} \end{aligned}$$

Algebraic Equations

What is a variable? letter \equiv # that changes

What is an algebraic expression? \rightarrow variable, operations
(No Equal)

What terms are associated with addition? more, add, greater, increase
Sum

subtraction? less, subtract, less than, decrease
difference.

multiplication?
 \hookrightarrow repeated, product, double, triple

division? quotient, share, half, third

What is an equation? var, operation, Equal = quarter

What is the difference between an algebraic expression and an algebraic equation?

Algebraic Equations

An algebraic expression contains a variable and an operation.

An **algebraic equation** contains an algebraic expression plus it also has an equal sign.

Example 1) twice a number increased by 4 is 10

LET x represents the number
 $2x + 4 = 10$

Example 2) a number divided by 8 decreased by 3 is 27

LET n represents the number
 $n/8 - 3 = 27$

Often you will be given word problems, where you have to determine what the unknown is, choose a variable, then write and solve the equation.

$$S = 2A + 4$$

Example: Sue is double Andy's age increased by 4. If Sue is 44, how old is Andy?

$$44 = 2A + 4$$

Let a represent Andy's age

$$2a + 4 = 44$$

Write an algebraic equation for each sentence.

- (a) 4 times my hourly wage is \$36**
- (b) If Sandi had earned \$8 more, she would have earned \$110**
- (c) Amab spent \$3 and has \$17 left**
- (d) \$5 more than Melina's savings is \$320**
- (e) one half of Carlo's pay is \$45**
- (f) Six added to one half a number is seven.**
- (g) the amount of snowfall decreased by 10 is 21cm.**
- (h) 5 times Dave's height increased by 45 is 785.**

- (a) 4 times my hourly wage is \$36
 $h = \text{wage}$ $4h = 36$
- (b) If Sandi had earned \$8 more, she would have earned \$110
 $s = \text{Sandi's earnings}$ $s + 8 = 110$
- (c) Amab spent \$3 and has \$17 left
 $m = \text{money at beginning}$ $m - 3 = 17$
- (d) \$5 more than Melina's savings is \$320
 $m = \text{savings}$ $m + 5 = 320$
- (e) one half of Carlo's pay is \$45
 $c = \text{Carlo's pay}$ $\frac{c}{2} = 45$
- (f) Six added to one half a number is seven.
 $n = \text{number}$ $\frac{n}{2} + 6 = 7$
- (g) the amount of snowfall decreased by 10 is 21cm.
 $n = \text{amt of snowfall}$ $n - 10 = 21$
- (h) 5 times Dave's height increased by 45 is 785.
 $a = \text{Dave's height}$ $5a + 45 = 785$

Homework Grade 7 Equations Sheet #1-6

**Grade 7 Unit 6
Equations Sheet**

1. Write a sentence for each equation.

a) $n + 11 = 15$ b) $4n = 24$ c) $n/6 = 5$ d) $3n + 4 = 19$

2. Write an equation for each sentence.

a) Two more than five times a number is 17.

b) Shawn's age 9 years from now will be 23.

c) The perimeter of a regular hexagon with side length s centimetres is 42 cm.d) The cost of three boxes of popcorn at \$3 each, and two drinks at x dollars each is \$17.

4. Write an equation to represent each situation.

a) Samantha has 16 CDs. She has 4 more CDs than Marlene. How many CDs does Marlene have?

b) Juni doubles the number of comic books he has, he will have 14 comic books. How many comic books does Juni have?

c) Five more than three times a number is 17. What is the number?

d) In the game of Yonder, a player scores x points for a Pika and 3 points for a Grinner. Samuel scored 20 points. He had 4 Gridders and 2 Pikas. How many points is one Pika worth?5. Describe a situation that can be represented by the equation $2n + 3 = 15$.

6. Angelica is thinking of a number. She multiplies it by 5 and then adds 7. The result is 22. Write an equation to represent this situation.
