1. Hundreds grid

Show 100% → shade in all squares
 1% → shade in one square

2. Show 0% → don't shade any in.

3. $\frac{1}{5} = \frac{20}{100}$ or 20% $0.\underline{2}\%$ or 0.02
 $\frac{1}{5}\%$ is less than 1%,
 so they are not the same

5. In Ex 3, you could solve without finding percent, because you could estimate

$$\frac{23\frac{1}{2}}{30} \approx \frac{24}{30} = \frac{8}{10}$$

$$\frac{31\frac{1}{2}}{40} \approx \frac{32}{40} = \frac{8}{10}$$

→ has smaller pieces, therefore is greater

Recall that when the whole is 1.0, you know that:

$$\begin{aligned}100\% &= 1.0 \\10\% &= 0.1 \\1\% &= 0.01\end{aligned}$$

We can extend the pattern to write percents less than 1% as decimals:

$$\begin{aligned}0.1\% &= 0.001 \\0.5\% &= 0.005\end{aligned}$$

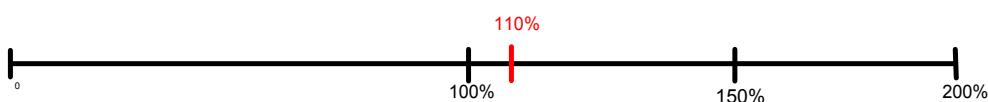

We can extend the pattern to write percents greater than 100% as decimals:

$$101\% = 1.01$$

$$110\% = 1.10$$

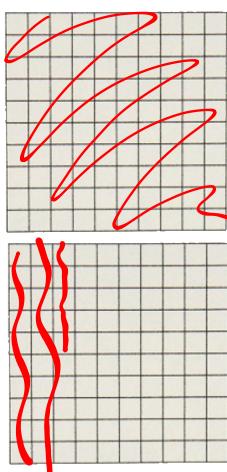

$$150\% = 1.50$$

$$200\% = 2.00 \text{ or } 2$$

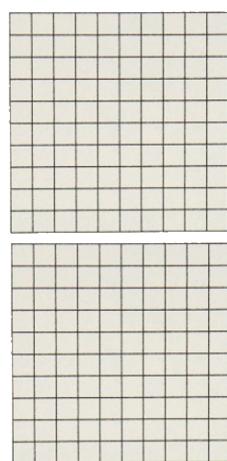

1) One hundred chart represents 100%. Shade hundred charts to show each percent. Write each percent as a fraction and as a decimal.

b) 150%

c) 210%

2) Write each percent as a decimal and draw a number line to show the percent.

b) 0.5%

Finding Percents of a Number

What does "of" mean in math?

Of means to multiply

Mentally

So how do you find the percent of a number?

How many different methods can you use to find :

(a) 50% of 70

$$\frac{50}{100} = \frac{1}{2}$$

$$\frac{1}{2} \text{ of } 70$$

(like \div # by 2)

$$50\% \text{ of } 70 = 35$$

(b) 10% of 120

$$\frac{10}{100} = \frac{1}{10}$$

$$\div \text{ by } 10$$

→ move decimal
1 place to left

$$10\% \text{ of } 120 = 12$$

(c) 25% of 80

$$\frac{25}{100} = \frac{1}{4}$$

$$\div \text{ by } 4$$

$$25\% \text{ of } 80 = 20$$

(d) 57% of 30

What percents can you find mentally?

Pass out and discuss notes, on next slide

50 7 $\xrightarrow{2} \xrightarrow{5} \xrightarrow{1}$

$$\begin{array}{r}
 57\% \text{ of } 30 \\
 50\% \text{ of } 30 = 15.0 \\
 5\% \text{ of } 30 = 1.5 \\
 2\% \text{ of } 30 = 0.6 \\
 \hline
 17.1
 \end{array}
 \quad
 \begin{array}{l}
 10\% \text{ of } 30 = 3 \\
 \div 2 \quad 95\% \text{ of } 30 = 15
 \end{array}
 \quad
 \begin{array}{l}
 1\% \text{ of } 30 = 0.30 \\
 \frac{1}{100} \text{ like } \div \text{ by } 100 \\
 2\% \text{ of } 30 = 0.60
 \end{array}$$

Estimating and Mentally Calculating Percents

There are several percents that you can figure out without a calculator.

100 % - 100% of a number is the number itself.

50% - You can easily find 50% of a number by dividing the number by 2.
Ex. 50% of 68 = 34

25% - You can easily find 25% of number by dividing the number by 4.
Ex. 25% of 64 = 16

10% - You can easily find 10% of a number by dividing the number by 10.
Ex. 10% of 678 = 67.8 (*move decimal 1 place left*)

1% - You can easily find 1% of a number by dividing the number by 100.
Ex. 1% of 52.8 = 0.528 (*move decimal 2 places left*)

33 1/3 % - You can easily find 33 1/3% of a number by dividing the number by 3.

So if you can find the above percent, then there are also many, many more that you can find.

How can you find:

5% - find 10%, then divide by 2.

20% - Find 10%, then multiply by 2.

30% - find 10% then multiply by 3.

60% - find 10% then multiply by 6.

2% - find 1% then multiply by 2.

4% - find 1% then multiply by 4.

11% - find 10%, find 1% then add the 2 answers

15% - Find 10%, then find 5% then add the 2 answers.

75% - find 25% then multiply by 3.

90% - find 100%, then find 10% and subtract the answers.

55% - find 50%, then find 5% and add the answers.

150% - find 100%, then find 50% and add the answers.

If you have to estimate a percent, change the percent to the closest number that you can find mentally, or change the number itself to an easy number to work with.

30% of 50

$$\begin{array}{r} 10\% \text{ of } 50 = 5 \\ \times 3 \quad \quad \quad \downarrow \times \\ 30\% \text{ of } 50 = 15 \end{array}$$
