

Warm Up Grade 8

Feb. 12, 2018

Use Mental Math (show work)

30% of 250

$$\begin{array}{l} 10\% \text{ of } 250 = 25 \\ \downarrow \times 3 \\ 30\% \text{ of } 250 = 75 \end{array}$$

24% of 3600

$$\begin{array}{l} 10\% \text{ of } 3600 = 360 \\ \times 2 \\ \hline 20\% \text{ of } 3600 = 720 \\ \div 5 \\ \hline 4\% \text{ of } 3600 = 144 \\ \hline 24\% \text{ of } 3600 = 720 + 144 = 864 \end{array}$$

1% of 3600 = 36

$$\begin{array}{l} 1\% \text{ of } 3600 = 36 \\ \times 4 \\ \hline 4\% \text{ of } 3600 = 144 \end{array}$$

24% of 3600 = 864

Use a calculator for the following

21.5% of 1800

↓ convert % to decimal first (\div % by 100 to get deci)
then multiply

$$\begin{array}{r} 0.215 \times 1800 \\ = 387 \end{array}$$

Pg 24/6

5) a) $120\% = 1.2$

b) $250\% = 2.5$

c) $475 = 4.75$

d) $0.3\% = 0.003$

e) $0.53\% = 0.0053$

f) $0.75\% = 0.0075$

#5,6,10, 11

	$\xrightarrow{\times 100}$	Percent	Fraction
b) a) 1.7		170%	$\frac{170}{100} = \frac{17}{10} = 1\frac{7}{10}$
b) 3.3		330%	$\frac{330}{100} = \frac{33}{10} = 3\frac{3}{10}$
c) 0.003		0.3%	$\frac{3}{1000} =$
d) 0.0056		0.56%	$\frac{56}{10000} = \frac{28}{5000} = \frac{14}{2500} = \frac{7}{1250}$

$$10) \text{ i) } \frac{1}{3} = 0.\overline{33} = 33.\overline{3}\%$$

$$\text{ii) } \frac{2}{3} = 0.\overline{6} = 66.\overline{6}\%$$

$$\text{iii) } \frac{3}{3} = 1 = 100\%$$

$$\text{iv) } \frac{4}{3} = 1.\overline{3} = 133.\overline{3}\%$$

$$\text{v) } \frac{5}{3} = 1.\overline{6} = 166.\overline{6}\%$$

$$\text{vi) } \frac{6}{3} = 2 = 200\%$$

b) As the numerator increases by 1 the percent increases by $33.\overline{3}\%$

$$c) \text{ i) } \frac{7}{3} = 2\frac{1}{3} = 2.\overline{3} = 233.\overline{3}\%$$

$$\text{ii) } \frac{8}{3} = 2\frac{2}{3} = 2.\overline{6} = 266.\overline{6}\%$$

$$\text{iii) } \frac{9}{3} = 3 = 300\%$$

$$\text{iv) } \frac{10}{3} = 3\frac{1}{3} = 3.\overline{3} = 333.\overline{3}\%$$

$$\text{v) } \frac{11}{3} = 3\frac{2}{3} = 3.\overline{6} = 366.\overline{6}\%$$

$$\text{vi) } \frac{12}{3} = 4 = 400\%$$

$$1) \text{ a i) } 200\% \text{ of } 360$$

$$\begin{array}{l} \times 2 \left(\begin{array}{l} 100\% \text{ of } 360 = 360 \\ 200\% \text{ of } 360 = 720 \end{array} \right) \times 2 \end{array}$$

$$\text{ii) } 20\% \text{ of } 360$$

$$\begin{array}{l} \times 2 \left(\begin{array}{l} 10\% \text{ of } 360 = 36 \\ 20\% \text{ of } 360 = 72 \end{array} \right) \times 2 \end{array}$$

$$\text{iii) } 2\% \text{ of } 360 =$$

$$\begin{array}{l} \times 2 \left(\begin{array}{l} 1\% \text{ of } 360 = 3.6 \\ 2\% \text{ of } 360 = 7.2 \end{array} \right) \times 2 \end{array}$$

$$\text{iv) } 0.2\% \text{ of } 360$$

$$\begin{array}{l} \times 2 \left(\begin{array}{l} 1\% \text{ of } 360 = 3.6 \\ 2\% \text{ of } 360 = 7.2 \end{array} \right) \times 2 \\ \div 10 \left(\begin{array}{l} 0.2\% \text{ of } 360 = 0.72 \end{array} \right) \div 10 \end{array}$$

b) The digit moves one place to the right each time you decrease your percent by a factor of 10

$$\text{c) } 2000\% \text{ of } 360 = 7200$$

$$\begin{array}{l} \times 10 \left(\begin{array}{l} 100\% \text{ of } 360 = 360 \\ 1000\% \text{ of } 360 = 3600 \end{array} \right) \times 2 \\ \times 2 \left(\begin{array}{l} 2000\% \text{ of } 360 = 7200 \end{array} \right) \times 2 \end{array}$$

$$\text{ii) } 0.02\% \text{ of } 360$$

$$\begin{array}{l} \div 10 \left(\begin{array}{l} 2\% \text{ of } 360 = 7.2 \\ 0.02\% \text{ of } 360 = 0.072 \end{array} \right) \div 100 \end{array} \text{ from a box}$$

Percents greater than 100% are used by store owners to calculate the prices of items they sell.

A store has to make a profit; that is, to sell goods for more than the goods cost to buy.

A store manager buys merchandise from a supplier. The price the manager pays is called the *cost* price. The manager *marks up* the cost price to arrive at the *selling price* for the customer. The markup is the *profit*.

$$\text{Cost price} + \text{Profit} = \text{Selling price}$$

The cost price of a winter coat is \$80.

The selling price of the coat is 230% of the cost price.

What is the selling price of the coat?

Illustrate the answer with a number line.

$$\text{Cost price} = \$80$$

hint change % to decimal

Can use calculator but
MUST show work

$$\begin{aligned} \text{Selling} &= 230\% \text{ of Cost} \\ &= 230\% \text{ of } \$80 \\ &\quad \downarrow \text{write as decimal} \\ &= 2.3 \times \$80 \\ \text{Selling Price} &= 184 \end{aligned}$$

$$\begin{aligned} \text{Cost} + \text{Profit} &= \text{Selling} \\ \text{Rearrange} \\ \text{Profit} &= \text{Selling} - \text{Cost} \end{aligned}$$

$$\begin{aligned} \text{Profit} &= \text{Sell} - \text{Cost} \\ &= 184 - 80 \\ \text{Profit} &= 104 \end{aligned}$$

In 2004, the population of First Nations people living on reserves in Alberta was 58 782.

About 0.28% of these people belonged to the Mikisew Cree band.

a) About how many people belonged to the Mikisew Cree band?

b) Estimate to check the answer is reasonable.

$$\left. \begin{array}{l} \text{b) } 1\% \text{ of } 58782 \approx 588 \\ \cdot \frac{\div 4}{0.25\%} \quad 58782 = \frac{\div 4}{147} \end{array} \right\}$$

a) 0.28% of these people

Mikisew Cree = 0.28% of First Nations People of Alberta

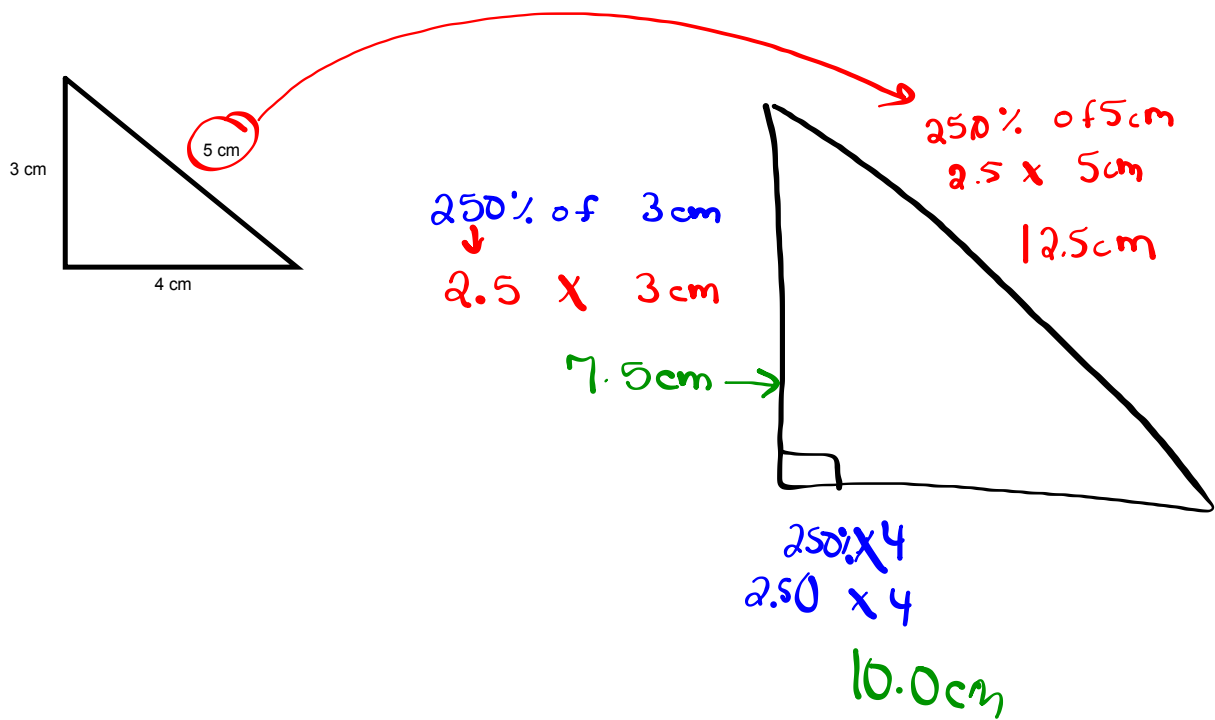

$$\text{M.C.} = 0.28\% \text{ of } 58\,782$$

↓ change to a decimal
by \div by 100

$$= 0.0028 \times 58\,782$$

$$= 164.6$$

This shape represents 100%. Draw a shape that represents 250%.

At the movie theatre, 1550 people attended in one week.

The next week the attendance increased by 125%.

a) How many people went to the movie theatre the second week?

b) Estimate to check your answer is reasonable.

$$\begin{aligned}
 \text{a) Pop of 2nd week} &= 125\% \text{ of 1st week} \\
 &= 125\% \text{ of } 1550 \\
 &\quad \downarrow \text{change to decimal } (\div \text{ by } 100) \\
 &= 1.25 \times 1550 \\
 &= 1937.5 \\
 &\approx 1938
 \end{aligned}$$

About 1938 people attended in the 2nd week.

b) Round pop to 1600

$$\begin{aligned}
 100\% \text{ of } 1600 &= 1600 \\
 25\% \text{ of } 1600 &= 400
 \end{aligned}$$

$$125\% \text{ of } 1600 \approx 2000 \quad \text{Overestimate}$$
