p 351  
(1, 2)

1.

Early maps gave the 1st clue that continents that are now separate ( such as South America and Africa ) had once been part of one huge land mass .

Their pieces were like pieces of a jigsaw puzzle , and this made scientist start to wonder if huge continents had broken up over time .

2. Biological - fossils of similar plants  
Geological → same types of rocks  
meteorological → climate conditions
