

Sheet 247 Calculating Discount

- 4) A coffee maker has a regular price of \$19.95.
- On Thursday, Kim can save 40%, how much will she save?
 - What is the sale price?
 - On Monday Kim could save 60% on the coffee maker, how much would that save her?
- 5) If a washing machine has a regular price of \$500 and is going on sale for 25% off.
- What is the sale price of the washer?
 - If you save 20% on a dryer that is \$450 then what is the sale price of the dryer?

6) Complete the chart:

Difference = Regular price – Sales Price

Fraction = $\frac{\text{Difference}}{\text{Regular price}}$ NOW use fraction to write decimal and PERCENT

Regular Price	Sale Price	Discount	Fraction	Decimal	Percent
(a) 25cents	17cents				
(b) \$2.00	\$1.50				
(c) \$25.00	\$19.50				
(d) \$400	\$360
